

A swiss new generation high performance product

The highly complex structure of its ingredients offer a wide spectrum of beneficial properties in one compound supporting a healthy development

BENEFITS

Zootechnical

- Improved Intestinal Health: Promotes a balanced gut microbiome, reducing pathogen load and support immunity.
- Reduction of Digestive Disorders: Helps in lowering the incidence of diarrhea, enhancing overall gut health.
- Reduced Stress: our products helping maintain immune balance, making animals more resilient to infections, stress, or environmental challenges and reducing need for antibiotics (immunomodulator).
- Antimicrobial Properties: Our natural biopolymers, based on modified sulphur free lignins, can limit the growth of harmful bacteria and parasites without disrupting beneficial microbes.
- Environmental Benefits: reduction in the concentration of ammonia in the water, firmer feces also help improve water quality.

Economical

- Enhanced Digestibility: Supports better nutrient absorption and feed efficiency
- Growth Promotion: Encourages weight gain and growth by improving nutrient uptake and metabolic efficiency.
- Enhanced Palatability and Feed Intake: the addition of our product to feed (like pellets), makes feed more appealing, encouraging consumption.
- Improved Feed Conversion Ratio FCR): by allowing better protein absorption.
- Improved homogeneity: product promotes homogeneity in growth

The new solution – developed in Switzerland

Product Features

Growth promoter

Anti stress

Improved water quality

Immune stimulator

Lower mortality

Anti microbial

Feed type

complementary feed for fish

Species

Finfish

Usage

Curative and preventative

For mixing in animal feed or special formulations

Digextra® Aqua is a novel, all-natural feed ingredient. **Digextra® Aqua** will strongly improve the animal's immune system and helps reducing the use of medicinal treatments. The highly complex structure of its ingredients offer a wide spectrum of beneficial properties in one compound supporting a healthy development.

Antibacterial

We've conducted extensive in vitro trials with reputable institutions, discovering that our product acts as an effective inhibitor against many bacteria currently causing challenges in the industry.

 VIBRIOS

 STREPTOCOCCUS

 AEROMONAS

 E-COLI

Intestinal Function in Tilapia

The histological analysis by the University of Baja California (UABC) highlights Digextra Aqua's positive impact on aquaculture. The increased villi size (blue) is a significant finding, as it boosts nutrient absorption, contributing to better growth and overall health in fish. This evidence supports Digextra Aqua as an effective tool for optimizing nutrition in aquaculture settings.

DIGEXTRA FED TILAPIA

CONTROL

Recommendation for use

For use in feed formulation: Add 0.7% - 1% of **Digextra® Aqua** to feed (7kg - 10kg per ton of feed), can easily be mixed and manufactured in pellets.

Packaging: **Digextra® Aqua** is available in 20kg bags or Jumbo Bags

Shelf Lives: 3 years from date of manufacture

Storage: to be stored at temperatures below 60 °C

Note: Please refer to the valid product label on the goods for the exact composition. All statements without guarantee. Changes are reserved.
